

The New York Life IndexFlex Variable Annuity–FP Series

Crediting and Interest Rates as of: 07.21.2025

Index-linked Account, Initial Term Strategies

The New York Life IndexFlex Variable Annuity–FP Series (IndexFlex) is designed to help investors accumulate money for retirement in variable, index-linked, and fixed investment options. Rates provided in this document apply to the Index-linked and Fixed Accounts. For information on variable investment options, refer to the IndexFlex Investing Guide which precedes or accompanies this flyer. Please keep in mind that the variable investment options do not offer fixed crediting rates; their returns will fluctuate.

Money invested in the Index-linked Account is eligible for credits based on the performance of the stock market index you select. With the Cap Rate crediting method, if performance for the index over the one-year measuring period is positive, the account is credited at the full year rate of return for the index, up to the predetermined Cap Rate. With the Flat Rate method, if performance for the index over the one-year measuring period is zero or positive, the account is credited at the predetermined Flat Rate. In either case, if index performance is negative, the account receives no index-linked credit, but will never lose money.

Cap and Flat Rates are set at contract issue and will not change throughout the Initial Term, which corresponds to the surrender charge period. At the end of the Initial Term, index-linked rates will renew for 1-year Recurring Term periods. Contact your registered representative for information about current crediting rates for the Recurring Term Strategies.

Index-linked Account crediting rates and Fixed Account interest rates will not be less than the guaranteed minimum interest rate (GMIR) stated in your policy. As of 7/1/2025, the GMIR is 0.05%.

Initial Term Cap and Flat Rates shown in this document reflect Enhanced Crediting Rates based on 50% or more of the initial premium allocated to a variable investment option, to the Fixed Account, or to any combination thereof. Each year that the Index-linked Account is eligible for interest credits during the Initial Term, Enhanced Crediting Rates will apply if the combined allocation to the variable investment options and/or Fixed Account is 50% or greater. If, as a result of transfers or withdrawals, your policy no longer qualifies for Enhanced Crediting Rates, Core Cap and Flat Rates will be used to calculate interest credits for the remainder of the Initial Term. Core Crediting Rates can be calculated by subtracting the rate enhancement percentages shown below from the Enhanced Rates shown on the previous page. Core and Enhanced Rates will be declared at issue for the Initial Term period (i.e., within the surrender charge period). Refer to the policy data page for more information.
